Custom JsonConverter

Custom JsonConverter<T>

Custom IContractResolver

Custom ITraceWriter

Custom SerializationBinder

JsonConstructorAttribute

JsonIgnoreAttribute |

This sample uses the JsonIgnoreAttribute to exclude a property from serialization.

▲ Sample

```
public class Account
{
   public string FullName { get; set; }
   public string EmailAddress { get; set; }

   [JsonIgnore]
   public string PasswordHash { get; set; }
}
```

```
Usage

Account account = new Account
{
    FullName = "Joe User",
    EmailAddress = "joe@example.com",
    PasswordHash = "VHdlZXQgJIF1aWNrc2lsdmVyJyB0byBASmFtZXNOSw=="
};

string json = JsonConvert.SerializeObject(account);

Console.WriteLine(json);
// {"FullName":"Joe User","EmailAddress":"joe@example.com"}
```

JsonConverterAttribute on a class

JsonConverterAttribute on a property

JsonObjectAttribute opt-in serialization

JsonObjectAttribute force object serialization

JsonObjectAttribute

NamingStrategy setting

JsonPropertyAttribute name

JsonPropertyAttribute order

JsonPropertyAttribute required

JsonPropertyAttribute items setting

JsonPropertyAttribute property setting

JsonIgnoreAttribute

ErrorHandlingAttribute

DefaultValueAttribute

Serialization Callback Attributes

DataContract and DataMember Attributes

Deserialize with dependency injection

Serialize with DefaultSettings

Serialize an immutable collection

Deserialize an immutable collection

Serialize ExtensionData

Deserialize ExtensionData

Deserialize DateFormatString

Serialize DateFormatString

Camel case property names

Snake case property names

Configure NamingStrategy

dictionary serialization

Configure NamingStrategy

property name serialization
