This question is an exact duplicate of:

[C# syntax shorthand for multiple condition testing [duplicate]](#) *1 answer*

I have the following statement in C#

```
if(user.member.RegistrationDate.Value.Month == 10 ||
user.member.RegistrationDate.Value.Month == 11)
```

My question is, is there a way to write this in shorthand eg;

```
if(user.member.RegistrationDate.Value.Month == 10 || 11)
```

c#

1   If those are expensive getters of properties (or you just want to make it more readable) it may make sense to simply get value into temp variable: `var value = user.member.RegistrationDate.Value.Month;` and then you can `if(value == 10 || value == 11) { ... }` . – Sinatr Nov 7 '16 at 12:59

How about

```
if (new [] {10,11}.Contains( user.member.RegistrationDate.Value.Month))
```
